

Tutoring Overview & Individualized Learning Plan

Students: Calliope & Noah

Tutor: Elijah Borjon

Philosophy & Approach

My tutoring is built around individualized learning. Every child processes information differently, so sessions are designed to adapt to attention patterns, energy levels, strengths, and interests. Rather than replicating school worksheets or going over homework, I structure sessions to build focus, confidence, and deep conceptual understanding through active engagement.

Lessons are intentionally dynamic: combining short focused skill blocks, hands-on problem solving, real-world application, and structured reflection. This keeps momentum high while reinforcing core skills.

Session Structure

- 45 minutes 1-1 focus per child (back-to-back sessions)
- 90 minutes total per visit per child
- Clear session roadmap with visible goals
- Alternating blocks to maintain engagement
- Built-in movement, discussion, and applied learning
- Ongoing progress tracking and periodic summaries for parents

Core Skill Development Areas

Mathematics

- Multiplication & division fluency
- Fractions, decimals, and percentages
- Multi-step problem solving
- Applied math (money, measurement, ratios)
- Structured organization of mathematical thinking
- Estimation and mental math confidence

Science Integration

- Experimental design (variables & controls)
- Measurement & data collection
- Logical reasoning & prediction
- Hands-on STEM projects to anchor abstract concepts

Language & Communication

- Clear written and verbal explanations of reasoning
- Hypothesis and conclusion writing
- Vocabulary development in academic contexts
- Verbal articulation of problem-solving steps

Engagement & Learning Environment

Sessions are designed to balance structure with creativity. Clear expectations and visible task lists support sustained focus, while real-world challenges and collaborative elements maintain curiosity. Short, goal-oriented work intervals help build endurance without overwhelm.

Students are encouraged to take ownership of their thinking. Mistakes are framed as part of the learning process, and progress is tracked through measurable skill growth.

Investment & Pricing Structure

Back-to-Back Twin Model: \$120 per visit (90 minutes total)

This includes:

- Individualized 45-minute session per child, totaling 90 minutes of learning per child per visit.
- Structured lesson planning tailored to learning style
- Applied STEM integration and project-based learning
- Skill tracking and periodic progress summaries
- Between-session review and light reinforcement guidance

Cost Breakdown:

- \$120 total ÷ 2 children = \$60 per child per visit
- With shared planning and collaborative learning overlap, the effective instructional value comes out to approximately \$30 per child per hour.

Expectations & Communication

- Consistent attendance supports steady progress.
- Light reinforcement between sessions may be suggested when helpful.
- Monthly progress updates provided.
- Open communication encouraged to adjust goals as needed.

Next Steps

Confirm weekly schedule and start date.

Begin with a structured baseline session to assess strengths and growth areas.

Refine learning plan after first 2–3 sessions based on observed engagement patterns.
