

Tutoring Overview for Vivienne and Sophia Gonzalez

Elijah Borjon

Structure & Frequency

- Once per week, in person
- Sessions are conducted separately to ensure each student receives fully individualized instruction
- Standard structure:
 - 45 minutes with Vivienne
 - 45 minutes with Sophia
- No overlap between sessions due to the difference in grade level and academic focus
- Structure may evolve over time depending on what best supports each student's progress

Scheduling & Availability

Available tutoring times are reflected on my scheduling calendar.

Families can view availability and book sessions directly through:

<https://calendly.com/borjonelijah/tutoring>

Once a weekly time is established, sessions will remain consistent week-to-week whenever possible.

Learning Philosophy & Approach

My role is best described as a confidence-builder and mentor while also helping fill academic gaps that traditional classroom environments sometimes miss.

Rather than simply replicating school instruction, I focus on:

- Building strong conceptual math foundations
- Translating classroom learning into real-world applications
- Developing reasoning and mathematical intuition
- Creating a learning environment that builds confidence and curiosity

The goal is to help students feel capable and comfortable with math so they develop lasting academic independence.

Vivienne – Grade 4

Vivienne is a concrete learner who benefits from interactive learning and being met where she currently is.

Focus Areas:

- Multiplication fluency
- Fraction understanding
- Core number sense
- Confidence in problem solving

Approach:

- Math games and interactive activities
- Visual models and hands-on strategies
- Review of weekly homework enrichment sheets
- Reinforcement of Spring Hill's STEAM-based math concepts

The primary goal is to strengthen Vivienne's foundational math skills while building confidence so she feels capable and prepared for future coursework.

Sophia – Grade 7

Sophia is working at a more advanced level and benefits from structured repetition and analytical problem solving.

Focus Areas:

- Linear equations
- Graphing relationships
- Percentages and financial math
- Algebraic reasoning

Approach:

- Targeted practice and concept reinforcement
- Application-based problems
- Flexible sessions guided by current assignments or topics
- Encouraging independent thinking and mathematical reasoning

First Session

The first session will be intentionally low-pressure and relationship-focused.

- Goal: understand how Vivienne and Sophia learn best
- Use conversation, games, and light problem solving rather than testing
- Establish a comfortable and supportive learning environment
- Adjust session structure after the first few weeks based on observations

Progress Updates

- Monthly written progress updates for each student (strengths, focus areas, confidence growth, next steps)
- Informal check-ins with parents as needed

Pricing

Standard Rate: \$80/hour

Family Rate for Two Students:

- 45 minutes per student (90 minutes total)
- \$120 per weekly session

This includes:

- Individualized tutoring sessions
- Lesson planning and preparation

- Customized learning materials
- Monthly written progress updates

Next Steps

- Schedule a weekly tutoring time through the Calendly link
- Begin with an introductory session to establish learning goals
- Adjust structure after the first few sessions based on student progress
