

Personalized Tutoring Plan

Students: Vivienne ("Viv") Gonzalez – Grade 4 | Sophia Gonzalez – Grade 7

Tutor: Elijah Borjon

Session Structure

- Weekly in-person tutoring
- Two fully separate sessions each visit:
 - 45 minutes with Vivienne
 - 45 minutes with Sophia
- Sessions remain individualized because the students are working at very different grade levels.
- Scheduling availability is reflected on Calendly: <https://calendly.com/borjonelijah/tutoring>

Learning Philosophy

My role as a tutor is to build confidence while strengthening conceptual understanding. Rather than simply replicating classroom instruction, sessions focus on helping students develop mathematical intuition, clear reasoning, and independence. Whenever possible, concepts are reinforced through discussion, visual models, and problem-solving activities that connect math to real-world thinking.

Vivienne – Grade 4 Support Plan

Viv benefits most from concrete learning, hands-on activities, and confidence-building math games. The focus will be strengthening foundational math skills so she feels secure moving into future math coursework.

Primary Focus Areas:

- Multiplication fluency and multiplication comparisons
- Multi-step word problems using the four operations
- Fraction understanding and visual fraction models
- Equivalent fractions and fraction comparisons
- Decimal understanding (tenths and hundredths)
- Measurement and data problems (time, distance, money)
- Geometry fundamentals including angles, symmetry, and polygons

Instructional Approach:

- Math games to reinforce multiplication and number sense
- Visual models and diagrams to support fraction understanding
- Practice with real-world word problems
- Review of weekly enrichment homework sheets
- Focus on explaining thinking verbally to build confidence

Sophia – Grade 7 Support Plan

Sophia is working with more advanced algebraic and analytical math concepts. Sessions will focus on strengthening problem-solving ability and reinforcing conceptual understanding.

Primary Focus Areas:

- Ratios and proportional relationships
- Unit rates and proportional graphs
- Integer operations and rational number calculations
- Expressions and equations including two-step equations
- Graphing relationships on the coordinate plane
- Percent problems (tax, discounts, financial math)
- Geometry including scale drawings, area, and angle relationships
- Introductory probability and statistics reasoning

Instructional Approach:

- Targeted repetition to strengthen algebraic fluency
- Practice translating word problems into equations
- Graphing and visual reasoning exercises
- Applied problem solving involving percentages and financial scenarios
- Encouraging independent explanation of mathematical reasoning

Progress Monitoring

- Monthly written progress updates for each student
- Identification of strengths, developing skills, and next areas of focus
- Adjustments to tutoring strategy as students progress

Pricing

Standard Rate: \$80/hour

Family Rate:

- Two students per visit
- 45 minutes per student
- \$120 per weekly session

This includes individualized lesson planning, custom materials, and progress monitoring.

Next Steps

1. Confirm a consistent weekly tutoring time
2. Begin with a relationship-focused first session
3. Adjust instruction strategy after the first 2–3 sessions based on student needs
